

Dear All,

I hope this email finds you well. It has taken some time, but enclosed you can find

- the report of the last meeting (highlighted in yellow on the ppt)
- a suggestion for a clinical protocol regarding the glottal closure biomarker. This document has to be further discussed and elaborated
- a VHI in which I highlighted in yellow these items of which I feel that they could be linked to glottal closure/voicing
- the links for downloading the algorithms Sopran (<https://www.tolvan.com/index.php?page=/sopran/sopran.php>) & Aalto Aparat (<https://sourceforge.net/projects/aparat/>)

Furthermore, I do have some unexpected -perhaps awkward- news. Due to personal and familial circumstances, I have decided to end my chairmanship of this committee - and even of my membership in this fantastic organization, the UEP. A change has come into my life, which means that I am reducing/ending my professional activities. I apologize for any inconvenience caused, but I hope I can count on your understanding. Who is willing to take over?? Let me be clear: I am very proud of our biomarker committee, how it has known a great launch and the most wonderful dynamism, not in the least thanks to you all! It would be great to see that the work continues at the same pace and momentum!

All the best and love to you all, **Mieke**
